## **Dr. Archana Agarwal**

*[Dr. Archana Agarwal](#), "Becoming a doctor was a dream of my parents to help serve humanity. Their wish got fulfilled. However, healthcare through modern medicine is a vast area focusing on micro-level super specialization. I wanted to choose an area where I could deal with human life in its totality with its emotions and landed up doing gynecology.*

*Infertility for me is very mystical subject and I could not believe that it is for real. The human body works on the premise of reproduction, and then what is wrong that increasingly, women are deprived of the most mystical experience of being a mother. For me, it was rejection and denial of the universe's will.*

*This question alone helped me discover my passion. On one hand I began to get equipped with the latest technologies as a doctor, and on the other hand, began to find answers outside modern medicine to search for the root cause of infertility. My search ended with Life Coach Naveen Varshneya who had found the cure for many incurable diseases and together we began to work on combining modern medicine with his science and Mannat Fertility Centre was born back 2 years year after 20 years of search, research and clinical experience with excellent success stories already on our way.*

### **Morpheus Ayaansh Fertility Center**

*[Morpheus Ayaansh Fertility Center](#) is one of the best [Test Tube Baby in Bangalore](#), The Centre provides a comprehensive range of services like Freezing, Egg and Sperm Donation, Blastocyst Transfer, Intrauterine insemination (IUI), In Vitro Fertilization (IVF) treatment and Surrogacy options. Through its holistic healing methods, they have been able to increase mortality rate, decrease biological age, reduce stress and provide a comforting experience. Mannat Fertility Clinic is well-known in the industry for its good track record of handling the diverse type of infertility issues and providing various types of solutions for it.*

### **In Vitro Fertilization (IVF): What Is It?**

*In Vitro Fertilization is an assisted reproductive technology (ART) commonly referred to as IVF. IVF is the process of fertilization by extracting eggs, retrieving a sperm sample, and then manually combining an egg and sperm in a laboratory dish. The embryo(s) is then transferred to the uterus. Other forms of ART include gamete intrafallopian transfer (GIFT) and zygote intrafallopian transfer (ZIFT).*

### **Why is IVF used?**

***IVF can be used to treat infertility in the following patients:***

- *Blocked or damaged fallopian tubes*
- *Male factor infertility including decreased sperm count or sperm motility*
- *Women with ovulation disorders, premature ovarian failure, uterine fibroids*
- *Women who have had their fallopian tubes removed*
- *Individuals with a genetic disorder*
- *Unexplained infertility*
